

## Together – We keep rolling

Have you ever wondered what happens if an ambulance has engine troubles or loses a wheel? What would it mean if this vehicle is out of service for a day, a week, a month even? In times like these it is even more important that mechanics all over the world have reliable and fast access to spare parts so that they can keep the vehicles that are essential for our societies on the road.

We at SKF offer spare parts for wheel end, driveline, powertrain, steering and suspension to keep all needed vehicles moving.

Do you have any troubles to get hold of the right spare parts? Get in contact with us and we will do everything we can to help. Together we keep rolling.
